Superior engineering. Trusted solutions. Customized materials.

Providing highly engineered advanced material solutions for over 120 years.

Providing highly engineered advanced material solutions for over 120 years.

# **A Broad Spectrum of Ceramic Material Solutions**

We have developed deep experience in working with technical ceramics materials, including Zirconia (YTZP, MSZ), Zirconia Toughened Alumina (ZTA), Alumina (74-99.8%) and Silicon Nitride (Si3N4). The unique attributes of each material allow our engineers to solve individual industry challenges, all while providing cost effective solutions.

#### **Alumina Provides Durability and Cost Effectiveness**

Alumina materials are a cost effective alternative to other materials where hardness is required for wear and corrosion resistance. Alumina also provides high compressive strength and is an excellent electrical insulator. Alumina is often used in rupture discs, wear liners, pump plungers, hydrocyclones and electrical insulators.

### **Silicon Nitride Provides Added Thermal Advantages**

Silicon Nitride offers superior strength and thermal performance for applications that require thermal shock resistance combined with overall material strength. At a lower density than the Zirconia materials, it is a lighter weight alternative while still providing excellent strength, corrosion and wear resistance.

# Zirconia Toughened Alumina for Greater Strength & Durability

Zirconia Toughened Alumina is an excellent choice for applications requiring greater toughness and higher strength than Alumina alone, while maintaining the corrosion resistance of Alumina. This material is used in similar applications as Alumina, but where the pressures and well conditions demand greater material strength and durability. ZTA can also be metalized and brazed, similar to Alumina, to offer companies unique possibilities when designing tooling components.

#### Other Zirconia Materials Provide Extended Life Performance

The Zirconia family of materials provides impact and toughness in extreme environments that often require extended life performance. YTZP offers superior strength, MSZ excellent toughness. Zirconia is often used in MWD/LWD tooling components, artificial lift components, and frac plug buttons.

# **Providing highly engineered material** solutions for over 120 years.

We specialize in providing highly technical, custom solutions for Energy Industry equipment applications. We are able to offer our customers deep expertise in the specific material properties of given ceramic materials, and matching them to specific use cases. Please contact us to discuss your unique challenges.

#### **Ceramic Engineering Insight**

A Unit of IDEX Corporation

We bring 120 years of ceramics engineering experience to our customers. Our engineers' expertise provides guidance in material selection, design-to-manufacture geometry and cost effective production.

#### **Proven Experience in Quality Documentation Assurance**

The performance of a ceramic component is dependent on the consistency and quality of its material properties. That's why we control every aspect of manufacturing; from raw material through to finished component. Powder preparation, forming, green machining, sintering and diamond grinding are all governed by the same principles of total quality management.

#### **Responsive Service Culture**

In the larger world of ceramics, we're a mid-sized firm located in Vermont. We pride ourselves on providing direct access to our key team members and quick response times for our customers.

# **Contact STC Material Solutions:**

STC Material Solutions 600 Industrial Park Road. St. Albans, VT 05478 (802) 527-7726

STC Material Solutions offers the oil and gas industry a variety of ceramic and hermetic material solutions to meet the increasingly severe service requirements for petroleum and gas upstream processing. As conventional and unconventional wells become more extreme operating environments, with higher pressures, temperatures and extreme pH, our engineers continue to collaborate with you to find the best material solutions for your specific challenges.

**Advanced Ceramic Solutions** 

for the Oil & Gas Industry

# **Proven Performance in Extreme Operating Environments**

Technical Ceramics are well suited for challenging operating conditions due to their unique properties, which include:

- **High Temperature Resistance** important in oil field settings as temperatures continue to rise downhole and thermal shock can be an issue.
- **Toughness** including impact and vibration resistance
- **Hardness** providing wear and erosion resistance
- Chemical Resistance to both acidic and basic environments.

# **The Cost Effective Choice**

Experience in oil & gas settings has shown that technical ceramics often provide better performance than traditional materials in high temperature, corrosive, wear and chemical environments resulting in overall cost savings for our customers
